ABOUT RACEARTH

Racearth is a blockchain powered game project, consisting of two fields: Metaverse and gaming. First aim of the project is to combine playtoearn gaming and world of metaverse. There will a map divided into sections and users will be able to buy and sell these lands and there will be car races on these lands, so users will be able to attend races to earn.

Our team came up with this brilliant idea in the last quarter of 2021. In this one-year period, we started by planning every aspect of the project to make it perfect. We first had many meetings to think everything we need and after having the plan we started working. At the same time, we searched for different similar projects and analyzed what they did and what they didn't, then we evaluated their whole process to decide what will be good for our project. Being perfect starts with having a good team with great skills, and then working hard with this high qualified team. We took some lessons from other projects, we learned from their mistakes too.

We chose this name because we will have a system, combination of race and earth. Users will be able to play game in the metaverse side of the project and they will be able to have lands with some special features. People will be very excited about this because those two things are not separated, they are fully integrated to each other. So, users can play racing game and they can have lands in the same system. In order to make it more realistic, they can have this great experience with their VR if they want.

SECTION EARTH

03

The “Earth” section of the project is the metaverse side and users will have lands. These lands will be on real map, and they are divided as polygons. This map is real map of our world and people will be able to sell and their lands on this map.

These lands will have many attributes. They can have racetracks for racing, gas stations for filling the gas tank, car-mechanic to repair cars, tire places for changing tires, paint shops for painting the cars, shopping places for buying different things etc. Those attributes will be distributed with a special algorithm to all lands on the earth.

There can be many aims to have a land. One of them is just to buy them when they are cheap and sell them when they get more expensive. The other reason can be using the attribute of the land, for example if a user buys a land which has a racetrack on it, this user can arrange a race because this users’ land has a racetrack and racers have to pay to the landowner in order to attend the races. So, the owner of the land will earn from each race they organize.

Users can benefit from the other attributes of their lands. They will earn by selling gas if their land has a gas station, they will earn by repairing other users’ cars if they have a land which has a car-mechanic on it and so on.

SECTION EARTH

The lands will be on every continent with the shape of polygons and there won't be any land on oceans, seas, and rivers. People will be able to buy and sell the lands from wherever they want, such as famous cities, their homelands, or the places they have been to. But there is something to keep in mind: attributes. Before buying or selling a land, thinking carefully is important, because people can use an attribute which your land has, so instead of selling it, sometimes keeping it can be more profitable for the landowner.

Every process of this work will be work on blockchain so the sells will be done by the help of smart contracts too. Each sales period will have a price and there will be 5 of them. After each sale period, the prices of the lands will be higher, at least 20% more than the previous one. Each land will have its special price according to their attributes. For example, if a land has a racetrack, it will be more expensive than the one which has not. Before buying a land, thinking carefully is important, because best land is the one fits your strategy, and it can make profit for you.

SECTION RACE

05

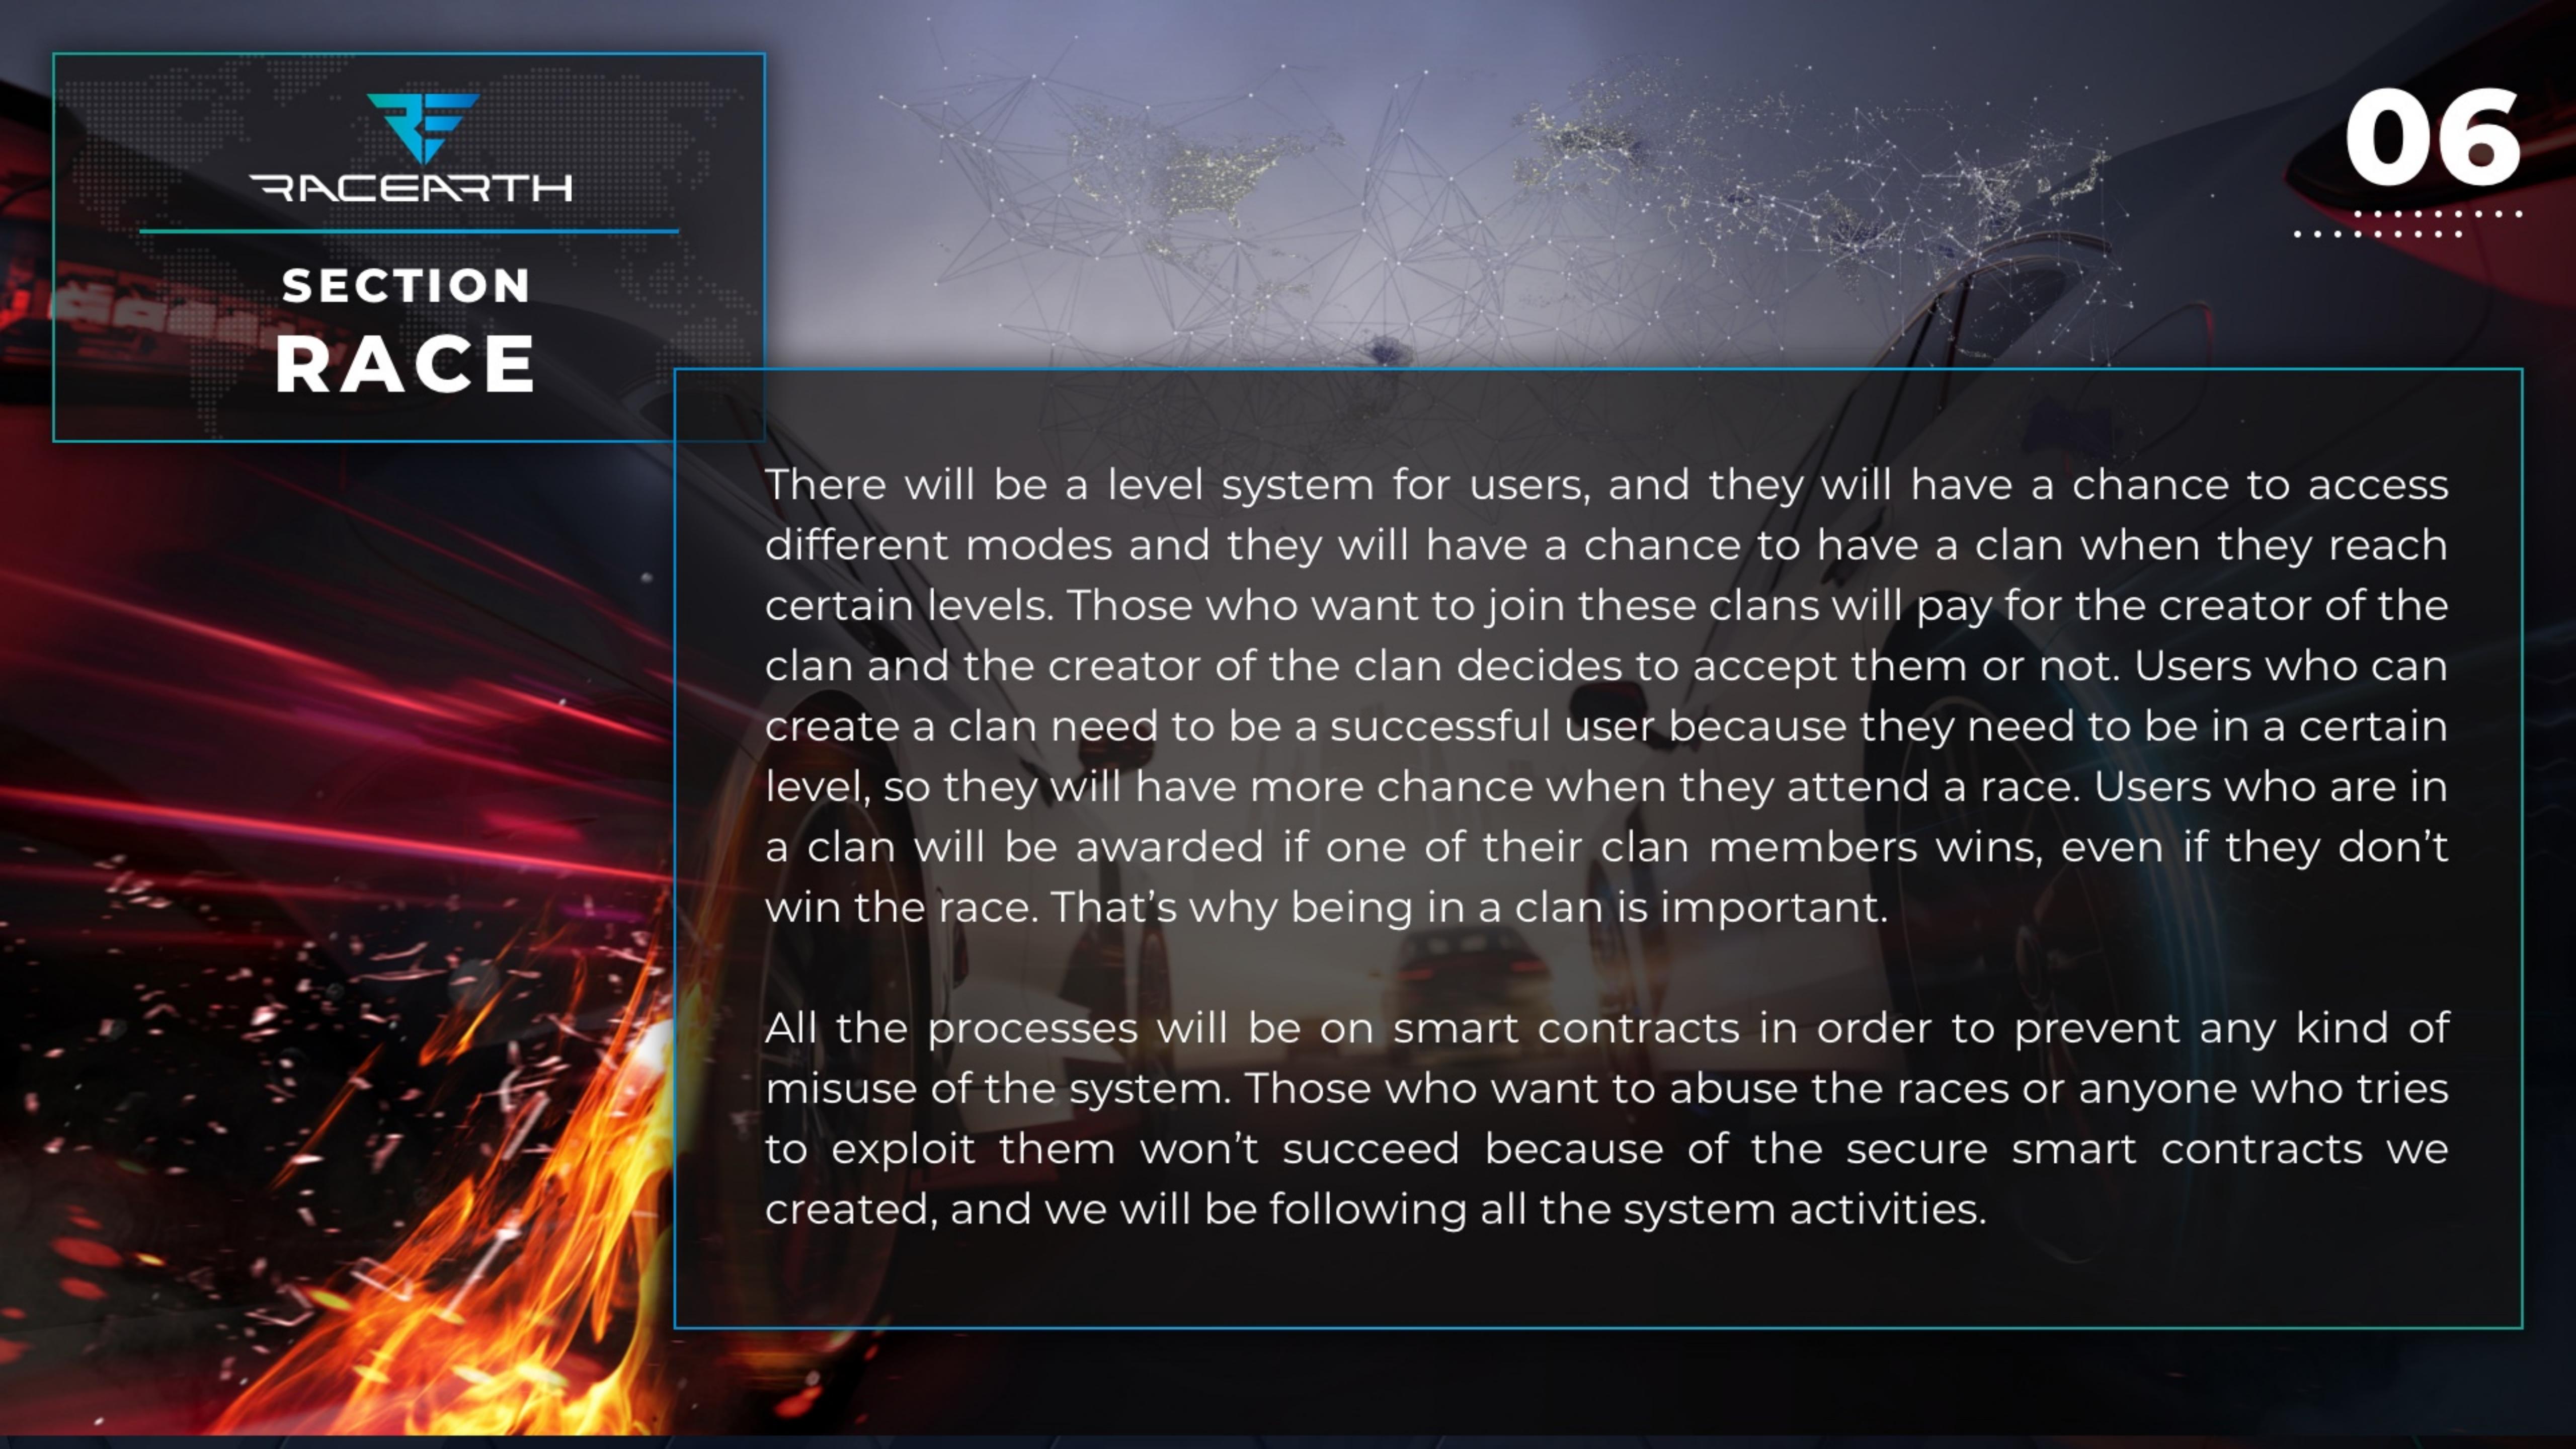

Users will be using all kind of attributes of the lands, but races will be held on the lands which have racetrack on them. Landowners are pretty much free to do any competition on their lands and by arranging these races they will be earning when some others are attending the races to earn. Time to time, we will be doing some big events with big prizes too.

When a landowner arranges a race, anyone who wants to attend has to pay for the fee the landowner wants. These fees will be gathered and after the race it will be distributed to the winner or winners. Most of the rules will be decided by the landowner before race and of course the landowner will have a percentage of the fees for being the owner of the land and for being arranger of the competition. Anyone who has a land, or a car will be able to watch the races if they want to feel the excitement of the competition.

We will create NFTs for each car in the game. The NFTs will be limited and by this way they will be valuable and like any other lands, we won't giveaway any car NFTs to any user. Any user who wants to have a car NFT has to attend the special sales we arranged.

SECTION RACE

There will be a level system for users, and they will have a chance to access different modes and they will have a chance to have a clan when they reach certain levels. Those who want to join these clans will pay for the creator of the clan and the creator of the clan decides to accept them or not. Users who can create a clan need to be a successful user because they need to be in a certain level, so they will have more chance when they attend a race. Users who are in a clan will be awarded if one of their clan members wins, even if they don't win the race. That's why being in a clan is important.

All the processes will be on smart contracts in order to prevent any kind of misuse of the system. Those who want to abuse the races or anyone who tries to exploit them won't succeed because of the secure smart contracts we created, and we will be following all the system activities.

SECTION RACE

07

Every activity on smart contracts will progress automatically. We will be monitoring the system all the time for any problem and there will be a test phase for preventing technical problems. By this way we will be having a faultless and perfect system.

Lands will be sold in different 5 sales. After that race game will be finished and NFTs will be prepared. We predict that it will take 3 months to test the beta version of the game and integrate the project, during this time there will be NFT sales. Beta version will be released just after land sales. We will have Discord and Telegram groups for bringing the race and earth communities together. We will announce the developments in these channels.

ABOUT TEAM

08

It is the first project of Crypto Welts company, who is founded in Germany and have been providing professional services about blockchain, software, marketing and many other fields since 2017. Crypto Welts company will be using those experience gained over years to the Racearth and takes full responsibility of the project. With the team they have consisted of 17 people, Crypto Welts will provide any service without taking any external support to make Racearth a perfect metaverse and play to earn project. They already have everything they need, and they are capable of doing everything, but for the integrating additional services they have big partners like Chainlink, Nuls etc.

We have been working on the project for months and already started to follow the roadmap. We are now talking to the IDO platforms, doing partnerships, and making agreements.
